Subject: Standard Purchasing Resolution 2: Award to Sole Bidder Meeting Specifications - Bay Floor Replacement at Fire Station 2 and 3

History

Over the past 20 years the Fire Department has endeavored to find a process to seal and treat the concrete floors in the Fire Stations, and at the Training Center. Currently, 4 Fire Stations and the Training Center have an epoxy floor coating. This coating was designed and installed to facilitate cleaning, resist staining by vehicle fluids, and provide a safe working surface for personnel and our visitors. Over time, the epoxy material has degraded and delaminated from the floor of Fire Stations 2 and 3. This has resulted in uneven floor surfaces. The material continues to degrade daily, with pieces of epoxy coming loose. This is creating slip and trip hazards. Additional maintenance is required in an effort to keep the floors safe.

The Fire Department has researched current methods of treating concrete floors in industrial and other high traffic occupancies and has determined that polished concrete is the best replacement alternative for the apparatus bay floor surfaces at the fire stations. This method was accomplished at Fire Stations 1 and 6, and the Training Center, yielding very positive results.
